PROFESSIONAL SUMMARY

Senior Java Developer with solid experience in healthcare and energy domains, building reliable high-load distributed systems using both monolithic and microservices architectures. Possesses full-stack capabilities, including front-end development.

Experienced in working within multinational, cross-functional teams and collaborating closely with stakeholders. Led development teams, mentored junior developers and trainees, conducted code reviews, and supported professional growth while fostering a culture of continuous learning and technical excellence.

CORE SKILLS

Languages:	Java, JavaScript
Frameworks:	Spring, Hibernate, Angular
Databases:	PostgreSQL, MySQL, MSSQL, MongoDB, Redis
Cloud / DevOps:	AWS, Docker, Kubernetes
Tools:	Maven, Gradle, Git, Jenkins, Jira
Messaging / Data:	Kafka, RabbitMQ
Testing:	Junit, Mockito, Serenity
Methodologies:	Scrum, SAFe, Kanban

PROFESSIONAL EXPERIENCE

Company: **VITech**

Role / Project: **Senior Java Developer / Study Marketplace | 2022 – 2025**

A platform connecting **clinical studies** with **clinics** capable of conducting clinical studies. The system maintains databases of clinics and clinical research studies, automates matching based on capabilities, patient availability, staff qualifications, and domain expertise, and integrates AI-driven decision support.

Responsibilities:

- Designed and implemented backend.
- Designed and implemented integrations with **Salesforce**.
- Built AI-enhanced matching logic using **AWS Bedrock**.
- Integrated Monitoring by NewRealic.
- Implemented frontend using **React**.
- I participated in architectural design, planning, and performance optimization.

- Mentoring Junior developers

Technologies: Java 21, Spring Boot, Spring Data JPA, Spring security, REST APIs, Retrofit, MapStruct, Open Api (Swagger), Caffeine, Flyway, PostgreSQL, Salesforce, React, Docker, AWS (Bedrock, S3, CloudWatch)
Market: US *Team Size*: 6

Role / Project: **Senior Java Developer / Cohort Builder | 2021 – 2022**

Application module that enables users to define criteria through the UI and retrieve patient cohorts accordingly.

Responsibilities:

- Designed and implemented backend.
- I participated in architectural design, planning, and performance optimization.

Tech: Java, Spring Boot, Elasticsearch, Redis, Docker, Kubernetes, AWS(EC2)
Market: US *Team Size*: 6

Role / Project: **Full Stack Software Developer / Blue Willow | 2021**

Cross-platform application that enables nursing home staff to track patient location and status in real time.

Responsibilities:

- Migrated application from Ionic 3 → Ionic 5.
- Add app monitoring.

Tech: Java, Spring Boot, Spring Boot Actuator, Micrometer, Prometheus, Grafana, Ionic, Angular, Docker, Kubernetes

Market: US *Team Size*: 5

Role / Project: **Frontend Software Developer / Insights | 2020–2021**

An Angular-based application that represents care program effectiveness through integrated Sisense BI dashboards.

Responsibilities:

- Designed and implemented frontend app.
- Designed and implemented dashboards in Sisense
- Integrated Sisense dashboards into angular app.

Tech: TypeScript, Angular, Sisense

Market: US *Team Size*: 5–8

Role / Project: **Lead / Full Stack Developer / Data Manager | 2017–2020**

High-load, fault-tolerant distributed system with a microservices architecture. It performs batch processing of data from multiple sources in various formats and includes a UI portal for configuration and monitoring of processing status.

Responsibilities:

- Designed and implemented frontend and backend.
- Migrated UI from Apache Click to Angular.

Tech: Java, Spring (Integration, Boot, Batch, AMQP), REST API, Lquibase, Hibernate, MySQL, Angular, Docker, JBoss, Apache Click, RabbitMQ, Kafka, HBase, Angular, AWS, ELK

Market: US *Team Size*: 5–8

Role / Project: **Java Developer / Outcomes Manager | 2013–2017**

Healthcare application with monolithic architecture for storing patient medical records. It provides reporting and alerting capabilities for both medical staff and patients.

Tech: JBoss, Struts, Spring, EJB, JSP, Hibernate, JasperReports, AngularJS, MySQL

Market: US *Team Size*: 6–8

Company: Prykarpattyaoblenergo

Role: **Lead Software Developer | 2008–2012**

Built and maintained a Java-based billing system for electrical equipment connection.
Led a team, gathered requirements, designed architecture, and coordinated development.
Tech: Java, Struts, Hibernate, Spring, jQuery
Team: 4

Role: **Software Developer | 2008–2009**

Desktop system for analyzing and registering power network equipment.
Tech: Delphi, Firebird
Team: 4

EDUCATION

Master's Degree — Information and Computer Systems
Institute of Management and Economy "GA" (2003–2008)
